

Finals Task 4. Designing Interactive Reports

In this phase of the project, I developed a collection of structured, executive-level dashboard pages in Power BI that consolidate regional fiscal health tracking, product category sales trends, and target-versus-actual variance analysis into clean, interactive visualizations.

In this image, I set up a summary matrix view to audit basic performance metrics by fiscal year, showing total orders, sum of sales, total cost, net profit, and profit margin side-by-side with region and year slicers.

In this image, I designed an executive overview dashboard incorporating an Adventure Works logo, interactive geographic region slicers, a dual-axis line and column chart for monthly trends, a stacked column chart for regional product distribution, and a horizontal bar chart summarizing categories by quantity.

In this image, I created a performance target dashboard using card visuals to show variance metrics, a horizontal clustered bar chart comparing target versus actual sales by month, and a corresponding vertical column chart to emphasize performance gaps over time.
