

Midterm Task 3 Normalization using Power Query

Normalized data using powerquery and created a diagram view

Power query

The screenshot displays the Microsoft Excel interface with the Power Query Editor open. The main window shows a table with 29 rows and 8 columns, representing normalized data. The columns are: order_id, date, product_id, category_id, subcategory_id, store_id, city_id, and country_id. The data is organized into a diagram view, showing the relationships between the fact table and the dimension tables (product_dim, category_dim, subcategory_dim, store_dim, city_dim, and country_dim). The diagram view is located on the right side of the screen, showing a hierarchical structure of the data. The Power Query Editor's ribbon is visible at the top, and the 'Query Settings' pane is open on the right, showing the 'APPLIED STEPS' and 'PROPERTIES' sections.

order_id	date	product_id	category_id	subcategory_id	store_id	city_id	country_id
